

# Fitchrona Road and Nesbitt Road Intersection

## Project Background

The City of Fitchburg is planning to improve the Nesbitt Road and Fitchrona Road intersection.

The Nesbitt Road and Fitchrona Road intersection is currently controlled with a four-way stop. Over the past several years, traffic volumes have steadily increased and the intersection now experiences significant delays and long lines of traffic during peak traffic hours. The City will evaluate existing traffic operations at the intersection and recommend improvements to address current and future traffic volumes.

## Future Project Activities

The project is currently in the early stages of alternatives development. Traffic signal and roundabout alternatives are being considered. Some alternatives may include changes to the roadway alignment. Alternatives will be evaluated to determine which one best reduces traffic congestion while minimizing construction cost and impacts to adjacent properties. Additional considerations include constructability and public input.

A public open house is scheduled for March 27th from 6:00 PM - 7:00 PM at Fitchburg City Hall. The meeting will include exhibits and handouts of preliminary alternatives. Additional meeting details and materials will be made available on this website once available.

Design of the chosen intersection improvement alternative will be completed this summer. Construction is anticipated in the summer of 2019.
